Models 356A43, 356A44 and 356A45 are miniature and lightweight triaxial ICP® accelerometers that are TEDS IEEE 1451.4 enabled. The accelerometers are hermetically sealed and packaged in a 0.4 inch (10.16 mm) titanium cube that weighs 0.15 ounces (4.2 grams). The TEDS feature self identifies these accelerometers and describes the type, operation and their attributes making them extremely easy for the operator to track. Ground isolated (J) models reduce electrical noise and potential for ground loops. High temperature (HT) models have extended operating temperatures up to 325 °F (163 °C).

## TYPICAL APPLICATIONS

- Modal and structural analysis
- NVH studies on automotive parts
- Space restricted installations
- Drop testing and package testing
- Small component qualification testing
- General purpose vibration testing
