

- 0.01 μHz to 30 MHz, 20 Vp-p, 1 or 2 channels
- Intuitive operation with a 3.5" LCD screen
- Synchronize up to 6 units to provide up to 12 output channels
- A variety of sweeps and modulations

How can you replicate real world signals? Precisely

FG400 Series Arbitrary/Function Generator

Bulletin FG400-01EN

Features and benefits

Easily generate basic, application specific and arbitrary waveforms.

The FG400 Arbitrary/Function Generator provides a wide variety of waveforms as standard and generates signals simply and easily.

There are one channel (FG410) and two channel (FG420) models. As the output channels are isolated, an FG400 can also be used in the development of floating circuits. (up to 42 V)

Basic waveforms

Advanced functions

Frequency sweep Setting items

start/stop frequency, time, mode (continuous, single, gated single), function (one-way/shuttle, linear/ log)

PWM

Setting items carrier duty, peak duty deviation Output duty

the range of carrier duty ±peak duty deviation

AM Setting items

carrier amplitude, modulation depth Output amp.

the range of amp./2 \times (1 ±mod. Depth/100)

Auto Oscillation and stop are automatically repeated with the respectively specified wave number.

Trigger

Burst

Oscillation with the specified wave number is done each time a trigger is received.

Oscillation is done in integer cycles or half cycles while the gate is on.

For trouble shooting

Arbitrary waveforms (16 bits amplitude resolution) of up to 512 K words per waveform can be generated. 128 waveforms with a total size of 4 M words can be saved to the internal non-volatile memory. Waveforms can be selected from the displayed list. Waveforms can be created in the FG400 or with the editor software.

The list of arbitrary waveforms

Editing screen in the FG400

Editing screen of the editor software

Acquire signal noise in the field, and then recreate it in the lab

The FG400 can generate signals as arbitrary waveforms that have been acquired by measuring instruments. Trouble shooting is made easier as the FG400 can generate waveforms that are difficult to reproduce. For example noise that only occurs on site. With the XviewerLITE software (freeware), waveform (binary data) that is acquired using a YOKOGAWA DL950 or DLM5000 can be analyzed on the PC to find the abnormal waveform. This abnormal part can then be clipped, saved and generated using the FG400.

[Application]

Clipping the abnormal signal, then adding it to the normal signal

Connect the clipped abnormal signal output of channel 2 to the additional input terminal of channel 1, and then press the Manual trigger key. The abnormal signal is added to the normal pulse waveform that is set on channel 1.

Features and benefits

Application-specific waveforms are also standard

Parameter-Variable Waveforms

In some cases engineers need application-specific waveforms like those needed to evaluate the response characteristics of mechanical/ electrical circuits and to emulate power supply circuits. The FG400 provides 25 different types of waveform as standard. As the parameters of application-specific waveforms can be changed like those of basic waveforms, waveforms are quicker and easier to generate.

Manually program waveform patterns

Sequence function

5

Sequences of different waveform patterns can be generated by programming the parameters. Complex sequences can be easily created using the "Sequence Edit Software".

Available parameters include:

waveform, frequency, phase, amplitude, DC offset, square wave duty, step time, hold operation, jump destination, number of jumps, step stop phase, branch operation, step termination control, step sync code output

When 2 channels are linked (FG420 only)

In the FG420 the two output channels can be linked. In this mode, both output signals vary when either channel is adjusted.

- Independent: Independent setting
- 2- phase: Holds the same frequency
- Constant frequency difference: Holds the frequency difference as a constant value
- Constant frequency ratio: Holds the frequency ratio as a constant value
- Differential output: Same frequency, amplitude, and DC offset. Reverse phase waveform

When you need more than 2 channels

By synchronizing multiple FG410 and FG420s, a generator of up to 12 phases (using six FG420s) can be created. The phase of each channel is synchronized to the master unit and can be individually adjusted.

Greater accuracy and stability

The FG400 has an external input terminal to increase frequency accuracy and stability by using a frequency reference with better accuracy than the built-in reference (for example, a rubidium frequency standard).

Channel modes	Independent, 2-phase (holds same frequency), Constant frequency difference, Constant frequency ratio, Differential output (Same frequency, amplitude, and Do		
The first sector of the	offset. Reverse phase waveform.)		
Equivalent setting, same operation	Set two channels at the same time.		
Frequency difference	0.00 µHz to less than 30 MHz (0.01 µHz resolution) CH2 frequency – CH1 frequency		
setting range Frequency ratio N:M	1 to 9,999,999 (for each of N and M)		
setting range	N:M = CH2 frequency:CH1 frequency		
Phase synchronization	Automatically execu	uted during channel mode switching	
Other functions	\/_lt=== {		
External 10 MHz frequency reference input	Voltage/waveform	0.5 Vp-p to 5 Vp-p, Sine wave or square wave	
Frequency reference		ultiple FG410, FG420 units.	
output	Voltage/waveform 1 Vp-p/50 Ω square wave, 10 MHz		
External addition input	Addition gain	external signal to the waveform output signal. ×2/×10/off selectable The maximum output voltage range is fixed to 4 Vp-p (×2)	
	\/_ll===={	or 20 Vp-p (×10).	
	Voltage/waveform	-1 V to +1 V, DC to 10 MHz (-3 dB) 10 kΩ, unbalanced	
Multi input/output		d sequence control.	
Synchronization of multiple units	Sync operation is possible. Up to 6 units can be connected with BNC cables in the form of master/slave connections, using the frequency reference output and extern 10 MHz frequency reference input.		
User-Defined Unit		he value in any unit, using a specified conversion expression.	
	Setting target	Frequency, period, amplitude, DC offset, phase, and duty	
	Conversion expression	[(Setting target value) + n] × m, or [log ₁₀ (setting target value) + n] × m	
	Unit character string	Specification of conversion expression and values of n and n g Up to 4 characters	
Setting saving capacity		to non-volatile memory)	
Interface		CPI-1999, IEEE-488.2)	
General Characteristics			
Display	3.5 inch TFT color l	_CD'5	
Input/output ground	<ul> <li>The signal grounds for waveform output, sync/sub output and external modulation addition input are insulated from the housing, (42 Vpk max. These signal grounds are common within the same channel.)</li> <li>The signal ground for the external 10 MHz frequency reference input is insulated from the housing. (42 Vpk max.)</li> <li>Each signal ground for CH1, CH2 and external 10 MHz frequency reference input</li> </ul>		
Power supply	is independent. AC 100 V to 230 V ±10% (250 V max.)		
	50 Hz/60 Hz ±2 Hz		
Power consumption	FG410 50 VA or less FG420 75 VA or less		
Operating temperature/ humidity range	0°C to +40°C, 5%RH to 85%RH (Absolute humidity of 1 g/m ³ to 25 g/m ³ , no condensation)		
Weight	Approx. 2.1 kg (main unit excluding accessories)		
Dimensions	216 (W) × 88 (H) ×	332 (D) mm (excluding protrusions)	
Sequence Editor			
Editing functions		pastes, inserts, and deletes steps sequence data to/from a file.	
		edited without connecting the device.	
Displaying functions		sts parameters for each step. creen: Graphs changes of up to five parameters.	
Transferring functions		ds sequence data to/from the device.	
		evice the arbitrary waveform used in the sequence.	
Device control functions	<ul> <li>Starts, stops and</li> </ul>	holds the sequence. execution status of sequence.	
Operating environment	Windows 8.1/10		
	USB interface     NI-VISA from Nati	ional Instruments USB driver (required)	
Arbitrary Waveform Edit	tor		
Editing functions		lard waveform and a mathematical expression)

Model	Suffix Code	Description
FG410		Arbitrary/Function Generator: 1-Channel, 30 MHz
FG420		Arbitrary/Function Generator: 2-Channel, 30 MHz
Power cord	-D	UL/CSA standard, PSE
	-F	VDE standard
	-R	AS standard
	-Q	BS standard
	-H	GB standard
	-N	NBR standard

#### Standard Accessories;

Power cord (1 set), User's manuals and application software (1 set)

Model/ parts number	Product	Description
705928	Multi input/output cable	For sweep/sequence control
751537-E2	Rack mount kit	Inch rack mounting (for 1 unit)
751537-J2	Rack mount kit	Millimeter rack mounting (for 1 unit)
751538-E2	Rack mount kit	Inch rack mounting (for 2 units)
751538-J2	Rack mount kit	Millimeter rack mounting (for 2 units)

Unit: mm

# **Related Products**

## ScopeCorder DL950

- Various modules for different measurement signals.
  - High-Speed 200 MS/s 14 bit Isolation Module
  - 6-ch Temperature/Voltage Input Module
  - CAN/CAN FD Moniter Module and etc.
- Up to 160-ch of multi-unit synchronized operation
- 8 G points large memory
- Real-time mathematical computation

## Mixed Signal Oscilloscope DLM5000

- 8 analog channels + 16-bit logic
- 350 MHz, 500 MHz analog bandwidth
- Large 12.1-inch LCD display with touch screen
- Long memory: Up to 500 M points
- Two-unit connection function "DLMsync"

#### Mixed Signal Oscilloscope DLM3000

- Lightweight and compact
- 4 analog channels/3 analog channels + 8-bit logic
- 200 MHz, 350 MHz, 500 MHz analog bandwidth
- 8.4-inch LCD with touchscreen
- Long memory: Up to 500 M points

## Notice

- Before operating the product, read the user's manual thoroughly for proper and safe operation.
- If this product is for use with a system requiring safeguards that directly involve personnel safety, please contact the Yokogawa offices.

This is a Class A instrument based on Emission standards EN61326-1, and is designed for an industrial environment. Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause.
