NOTES

- Before use check that the fluid in which you wish to use these devices is compatible either with Polysulfone or Trogamid[®]. Some common fluids and compatibility can be found in SST's [Liquid Level Switches – Installation, Operation and Compatibility Guide \(AN 0041\)](#).
- When using Trogamid[®] above +85°C some oil based liquids can cause deformation of the sensing tip, and must be tested for compatibility.
- Except on N-type with a 10kΩ internal resistor (-002).

- d) Recommended nuts and sealing accessories outlined within the [Accessory Table](#)
- e) Suitable for SAE-5 straight threaded port. Refer to SAE Standard J1926-1 (ISO 11926-1) for more information.
- f) NPT version can be sealed with PTFE tape.
- g) SST supplied M12 seal washer only suitable for low pressure environments (<7 bar). For higher pressure applications O-rings, PTFE tape or other sealing compounds are recommended. Customers should test in their application as required.

In order to suit any application, these sensors have been designed with various output circuit configurations. They are identified by the 3-digit code at the end of the part number as shown in [Order Information](#).

CAUTION: Take care when connecting loads.

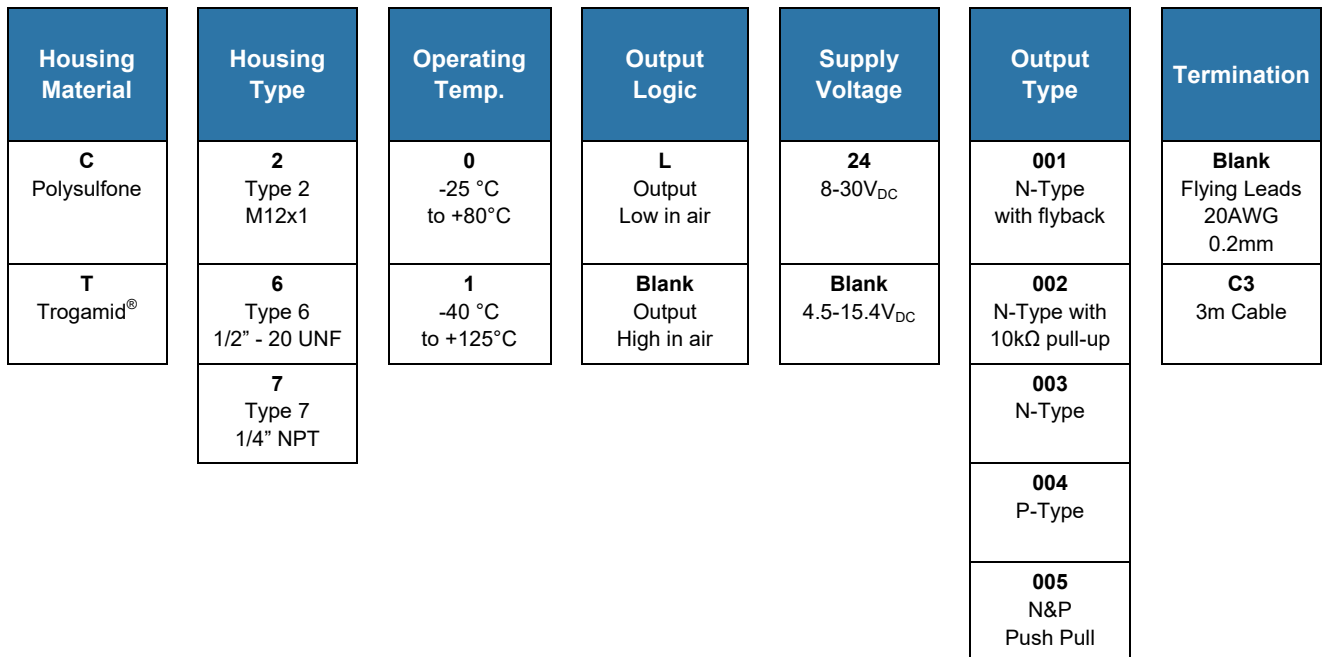

The minimum load impedance should not be less than $V_s/\text{max output current}$.

Note: Shorting the output to V_s or $0V$ will result in irreparable damage to the sensor.

Note: Colours shown are for 3-wire version. See electrical interface table on [page 2](#) for equivalent cable colours.

Generate your specific part number using the convention shown below. Use only those letters and numbers that correspond to the sensor and output options you require — omit those you do not.

! CAUTION

Do not exceed maximum ratings and ensure sensor(s) are operated in accordance with their requirements.

Carefully follow all wiring instructions. Incorrect wiring can cause permanent damage to the device.

SST Sensing Ltd recommend using alcohol based cleaning agents. Do NOT use chlorinated solvents such as trichloroethane as these are likely to attack the sensor material.

Failure to comply with these instructions may result in product damage.
