PX8000 Precision Power Scope

Bulletin PX8000-02EN

YOKOGAWA 🔶

nbn Austria GmbH

Auto ranging function

Item	Specification
Shape	Plug-in Input module Style
Module structure	Voltage module, Current module and Auxiliary (AUX) module Power measurement element: each one Voltage module and one Current module Maximum 8 modules (maximum 4 power measurement elements) can be installed AUX module can be installed maximum 3 (at least one power measuremen element must be installed).
Maximum channel number	8 ch, combination of Voltage/Current modules and AUX module
Maximum record length	Standard 10 M points for each voltage and current regardless of the installed number of modules.
	The memory cannot be combined, each memory of module is individual.
	50 M points for each voltage and current regardless of the installed number of input modules when /M1 option is installed.
	100 M points for each voltage and current regardless of the installed number of input modules when /M2 option is installed.

Voltage/Current input modules (760811/760812) Specifications

Input terminal type	Specification Voltage: Plug-in terminal (Female)
	Current: Direct input: Plug-in terminal (male)
	External current sensor input: isolated BNC (760812)
Input format	Voltage: Floating input, resistive voltage divider
input iornat	Current: Floating input through shunt
Measurement range	Voltage: 1.5/3/6/10/15/30/60/100/150/300/600/1000 Vrms (crest factor=2 at rated range input)
	Current: Direct input (5 A) 10 m/20 m/50 m/100 m/200 m/500 m/1/2/5 Arms
	(Crest factor=2 at rated range input)
	Current: External current sensor input (760812) 50 m/100 m/200 m/500 m/1/2/5/10 Vrms (Crest factor=2 at rated range input)
Input impedance	Voltage: Input resistance : Approx. 2 M Ohm Input capacitance: Approx. 10 pF
	Current: - Direct input: 5 A input element: approx. 100 m Ohm + approx. 0.19 uH - External current sensor input: approx. 1 M Ohm + approx. 17 p (760812)
Instantaneous maximum	Voltage: peak value of 2.2 kV or 1.5 kVrms, whichever is less.
allowable input (less than 20 ms)	Current: - Direct input (5 A input element): peak value of 30 A or rms value of 15 A, whichever is less - External current sensor input (760812): peak value less than or equal to 10 times the range (1 M Ohm)
Instantaneous maximum allowable input (less than 1 s)	Current: - Direct input (5 A input element): peak value of 8.5 A or rms value of 6 A, whichever is less. - External current sensor input (760812):
Instantaneous	peak value less than or equal to 10 times the range (1 M Ohm)
Continuous maximum allowable input	Voltage: peak value of 2 kV or 1.1 kVrms, whichever is less. If input frequency is higher than 100 kHz: less than (1100 – f) Vrms, f is the frequency in kHz However, continuous maximum allowable input voltage is bigger than 3 Vrms.
	Current: - Direct input (5 A input element): peak value of 8.5 A or rms value of 6 A, whichever is less. - External current sensor input (760812): peak value less than or equal to 4 times the range (1 M Ohm)
Continuous maximum	Maximum allowable voltage that can be measured
common mode voltage	Voltage input terminals: 1000 Vrms Current input terminals: 1000 Vrms Rated voltage of EN61010-2-030 standard: 600 Vrms
	External current sensor input connector: 600 Vrms
Safety Note:	Do not touch the inside of the BNC connector of the External Current Sensor input for safety reasons. Current Module (760813)
	1000 V CAT II: Rated voltage of EN61010-2-030
Rated voltage to ground	Maximum allowable voltage that can be measured Voltage input terminals: 1000 V
	Current input terminals: 1000 V Rated voltage of EN61010-2-030 standard: 600 V
	External current sensor input connector: 600 V
Safety Note:	Do not touch the inside of the BNC connector of the External Current Sensor input for safety reasons.
CMRR (Influence from common mode voltage)	Sensor input for safety reasons. When 1000 Vmm is applied between the input terminal and case with the voltage input terminals shorted, the current input terminals open, and the external current sensor input terminals shorted. $50\%60 Hz$: $\pm0.01\% of range + 5 mV j or less.$
	• Reference value for up to 100 kHz: $\pm \{(maximum rated range)/(rated range) \times 0.001 \times f + 0.001 \times f)\%$ of range + 5 mV} or less
	0.01% or greater. The unit of f is kHz. The maximum rated range in the equation is 1000 V.
	When 1000 Vrms is applied between the input terminal and case with the current input terminals open, and the external current sensor input terminals shorted. • 50/60 Hz:
	Direct input \pm (0.01% of range + 10 µA) or less. Sensor input \pm (0.01% of range + 25 µV) or less (760812)
	• Reference value for up to 100 kHz: $\pm \{(maximum rated range)/(rated range) \times 0.002 \times f \times 2^{(0.5 + f/1000)\% + 0.002 \times f of range + 10 \mu\text{A}) or less$
	For external current sensor input, add maximum rated range/rated range × (0.003 × f x 2^ (0.5 + f/5000) + 0.003 × f of range + 25 μ V) to the value abow 0.01% or greater. The unit of f is kHz. The maximum rated range in the equation is 5 A, or 10 V.
Line filter	Select from OFF, 500 Hz, 2 kHz, 20 kHz, and 1 MHz.
	Select from OFF, 100 Hz, 500 Hz, 2 kHz and 20 kHz.
Frequency filter	
Frequency filter A/D converter	Resolution: 12 bit Conversion ratio (sampling period): Approx. 10 ns.

	than 200%.
	Range down - When input rms level is lower than 30% of the range rating and peak is less than below range 180% of the range rating of the lower range.
xiliary (AUX) module (760851) Specification
Item	Specification
Effective measurement range	20 div, two times of measurement range
Number of input channels	2, switchable analog or pulse input
Input coupling	AC, DC, or GND
Input connector	Isolated BNC
Input format	Isolated unbalanced
Frequency characteristics	DC to 20 MHz (-3 dB point when sine wave of amplitude ±3 div is applied
Voltage-axis sensitivity setting	50 mV to 100 V (1-2.5-5 steps) (when using 1:1 probe attenuation)
Input impedance	1 M Ohm, ±1% Approx. 35 pF
-3 dB point when AC coupled low frequency attenuation point	10 Hz or less (1 Hz or less when using the 700929, 0.1 Hz or less when using the 701947)
Maximum input voltage (at 1 kHz or less)	Combined with the 700929 (10:1) or 701947 (100:1): ¹ 1000 V (DC+ACpeak) CAT II Direct input or cable not complying with the safety standard: ³ 200 V (DC+ACpeak)
Maximum allowable common mode voltage (at 1 kHz or less)	Working voltage of safety standard Combined with the 700929 (10:1) or 701947 (100:1): ²² 1000 Vrms (CAT II) Direct input or cable not complying with the safety standard: ⁴⁴ 42 V (DC+Acpeak) (0 and CAT II, 30 Vrms)
Influence of common mode voltage (CMRR)	-80 dB at 50/60 Hz (with input terminal shorten and 1000 Vrms (50/60 Hz) applies between input and case)
Bandwidth limit	Select from Full, 2 MHz, 1.28 MHz, 640 kHz, 320 kHz, 160 kHz, 80 kHz, 40 kHz, 20 kHz, and 10 kHz Cut-off characteristics: –18 dB/OCT (when 2 MHz, Typical)
Probe attenuation setting	Voltage probe: 1:1, 10:1, 100:1, 1000:1
Auto ranging function	Range up When one of following conditions is satisfied, range is changed to higher - DC input level is more than 110% of selected range rating - Input peak level is more than 200% of selected range rating (when motor mode is OFF) - Input peak level is more than 145% of selected range rating (when motor mode is ON) Range down When following all conditions are satisfied, range is changed to lower - DC input level is less than 30% of selected range rating (when motor mode is OFF) - Input peak level is less than 180% of less range rating (when motor mode is ON)
A/D conversion resolution	12 bit
Withstand voltage	1500 Vrms for 1 minute (across each terminal and earth) (60 Hz)
Insulation resistance	500 VDC, 10 M Ohm or more (across each input terminal and earth)
Accuracy (analog)	DC: ±1% of range (typical) Measured under the standard operating conditions. See page. 5, Accuracy
Temperature coefficient (analog)	±(0.1 of range/°C) (typical)
Amplitude Input range (analog)	±110% of range rated
Amplitude input range (pulse)	±5 Vpeak
Frequency measurement range (pulse)	2 Hz to 1 MHz
Judged input amplitude (pulse)	H level: -9.9 V to +10.0 V, L level: -10.0 V to +9.9 V
Input waveform (pulse)	50% duty cycle square wave
Pulse width (pulse)	500 ns or wider
Accuracy (pulse)	$\pm(0.05\%$ of reading) ±1 count error (10 ns), Except, the observation time is greater than or equal to 300 times the period of the pulse.
In combination with the 700	229/701947 Direct input (using a cable that does not

Range up - When input rms level is more than 110% of the range or the peak is more than 200%.

1

In combination with the 700929/701947

Withstand voltage: 1500 Vrms (1 minute) Allowable transient surge voltage (between the input terminals and earth): ±2100 Vpeak

Trigger Function

Auto, Auto Level, Normal, Single, N Single, or On Start
Auto, Auto Level, Normal, Single, N Single, or On Start
± 5 div of center 0 div; when trigger source is set to voltage, current or power of a power measurement element. ± 10 div of center 0 div; when trigger source is set to AUX module voltage input.
Select from ±0.1 div, ±0.5 div, ±1 div
0 to 100% (of the display record length; resolution: 0.1%)
0 to 10 s (resolution: 10 ns)
0 to 10 s (resolution: 10 ns)
A dedicated manual trigger key can be used.
Un, In, Pn, AUXn, EXT, or Time n=channel number (not when pulse inpu is selected)
Rising, falling or rising or falling
Date (year, month, and day), time (hour and minute), and time interval (10 seconds to 24 hours)
Un, In, Pn, AUXn or EXT (not when pulse input is selected)

Trigger type			
00 ,1	$A \rightarrow B(N)$:		gger A conditions are met, the PX8000 triggers gger B conditions are met N times.
		Count: 1 to	1000
		Condition A Condition B	
	A Delay B:		ecified amount of time elapses after the trigger A
		conditions a conditions a	are met, the PX8000 triggers when the trigger B
		Time: 0 to 1	0 s (resolution: 10 ns)
		Condition A Condition B	: Enter/Exit
	Edge on A:		gger A conditions are met, the period triggers on
			ultiple trigger source edges.
	AND:	The PX8000) triggers on the AND of multiple state conditions.
	OR:) triggers on the OR of multiple trigger source ates (or Window triggers)
	Pulse Width:		The PX8000 triggers when the time from when
			the trigger B conditions are met to when they change from being met to not being met is greater than the specified time.
		B>Time:	Time: 20 ns to 10 s (resolution: 10 ns) The PX8000 triggers when the time from when the trigger B conditions are met to when they change from being met to not being met is less than the creating time.
			than the specified time. Time: 20 ns to 10 s (resolution: 10 ns)
		B Time Out:	The PX8000 triggers when the trigger B conditions continue to be met for the specified period of time.
			Time: 20 ns to 10 s (resolution: 10 ns)
		B Between:	The PX8000 triggers when the period during which the trigger B conditions continue to be met is within the specified time range. Time: T1: 10 ns to 9.99999999 s T2: 20 ns to 10 s (resolution: 10 ns)
	Period:		triggers when the period during which the nditions continue to be met is within the specified
		T>Time:	The PX8000 triggers when the period of the trigger T conditions is longer than the specified time.
			Time: 20 ns to 10 s (resolution: 10 ns)
		T <time:< td=""><td>The PX8000 triggers when the period of the trigger T conditions is shorter than the specified time.</td></time:<>	The PX8000 triggers when the period of the trigger T conditions is shorter than the specified time.
			Time: 20 ns to 10 s (resolution: 10 ns)
		T1 <t<t2:< td=""><td>The PX8000 triggers when the period of the trigger T conditions is within the specified time range.</td></t<t2:<>	The PX8000 triggers when the period of the trigger T conditions is within the specified time range.
			Time T1; 20 ns to 10 s (resolution: 10 ns) T2; 30 ns to 10 s (resolution: 10 ns) The PX8000 triggers when the period of the
			trigger T conditions is within the specified time range. Time T1; 20 ns to 10 s (resolution: 10 ns)

Display	
FT	Power spectrum of input waveform, Maximum two windows
display	
K-Y Display	The X and Y axes can be selected from Un/In/Pn/AUXn, MATHn, (Maximum four traces, two windows).
surement Function and Co	
Crest Factor	Up to 200 (effective minimum input). Up to 2 (at the rated range input) CfU: Voltage crest factor, CfI: Current crest factor
Measurement period	Measurement period to calculate numerical values - Period of measurement update cycle based on zero crossing or extern gate signal source signal - 8192 points for harmonic measurement from specified start cursor
Wiring method	1P2W (Single phase 2 wire), 1P3W (Single phase 3 wire), 3P3W (3 phase 3 wire), 3V3A (3 phase 3 wire, 3 power meter method), 3P4W (3 phase 4 w It depends on the quantify and type of the installed modules.
Scaling	0.0001 to 99999.9999 can be set for scaling of VT ratio, CT ratio and power ratio when external current sensor, VT or CT are used for the inp Linear scaling function is available for AUX module (760851).
Averaging of numeric value	 Normal measurement items, Using one of the following methods perfor averaging on the normal measurement items; - Urms, Umn, Udc, Urmn, Uac, Irms, Imn, Idc, Irmn, Iac, P, S, Q - Power factor Lambda, Phase angle Phi, Crest Factor CfU/CfI, Correct Power Pc, Efficiency Eta Ito Eta 4 are determined from the averaged Urms, Irms, P, S, and Q - Select either exponential averages or moving averages - Exponential average: Select the attenuation constant from a value betwer 2 to 64 (Harmonic measurement items, U (k), 1 (k), P (k), S (k), and Q (k Power factor Lambda(k), Phase angle Phi(k) are determined from the averaged P (k) and Q (k), Phase angle Count from a value between 8 and 64 - Parameters of Z, Rs, Xs, Rp, Xp, Uhdf, Ihdf, Phdf, Uthd, Ithd, Pthd, Uth, futh, Uth, futh, Mr, hof, and K-factor are determined from the averaged
Zero level compensation /Null	Itili, Our, itili, MY, ItoL, and K-laction are determined informine averaged U (k), I (k), and P (k) - Only Exponential averaging is available for harmonic measurement itel Select the attenuation constant from a value between 2 to 64. Zero level can be compensated individually by module
	Following range can be compensated. Power element: Voltage/Current ±14% of range AUX module: Analog input ±60% of range: Pulse input
quency measurement	Specification
Veasurement Item	Normal measurement item; Voltage or current frequencies of all power measurement elements can measured
Measurement method	Reciprocal method
Measurement range	10 Hz to 5 MHz, input amplitude is more than 30% of range
Maximum frequency	5.0000 MHz
Accuracy	±(0.1% of reading) Conditions; - Time/div setting is more than 50 μS - At least 5 cycles input should be measured. - "Sampling frequency setting/input frequency" is more than 2.5 - 20 kHz frequency filer should be ON when input frequency is lower thar 20 kHz. - 2 kHz frequency filer should be ON when input frequency is lower thar

Item	Specification		
Acquisition mode	Normal: Normal waveform data acquisition Envelop: The peak values are held at the maximum sample rate regardless of the Time/div setting. Averaging: The number of times to average can be set to 2 to 65536 in 2 ^o steps.		
Record length	Selection of 100 kpoint/250 kpoint/500 kpoint/1 Mpoint/2.5 Mpoint/ 5 Mpoint/10 Mpoint/25 Mpoint (when /M1 or /M2 installed)/50 Mpoint (when /M1 or /M2 installed)/100 Mpoint (when /M2 installed)		
Zoom	Expand the displayed waveform along time axis (up to 2 separate locations). The zoom position can be automatically scrolled.		
Display format	1/2/3/4/6/8/12, and 16 analog waveform windows		
Display interpolation	Sampled points can be displayed through the use of dots (OFF), sine interpolation, linear interpolation or pulse interpolation.		
Graticule	Select of three types of graficule		
Auxiliary display ON/OFF	Scale values, waveform labels, the extra window, the level indicator, and the numeric display can be turned ON and OFF.		
X-Y Display	The X and Y axes can be selected from Un/In/Pn/AUXn, MATHn (Maximum four traces, two windows).		
Snapshot	The currently displayed waveforms can be retained on the screen. The Snapshot waveforms can be saved and loaded.		
Clear trace	The displayed waveform can be cleared.		
History	Maximum 1000 waveforms, depending on record length Arbitrary one waveform, all waveform or averaged waveform can be displayed.		

Vertical and Horizontal Control

Item	Specification
Channel ON/OFF	Un, In, Pn, AUXn or MATHn can be turned ON and OFF separately
ALL CH menu	The setting of the all channels while waveforms are displayed. A USB keyboard or mouse
Vertical axis zooming	\times 0.1 to \times 100 Upper and lower limits can be used to set the scale.
Vertical position setting	Waveform can be moved in the range of ± 5 divs from the center of the waveform display frame.
Scaling	0.0001 to 99999.9999 can be set for scaling of VT ratio, CT ratio and power ratio when external current sensor, VT or CT are used for the input.
Linear scaling	The linear scaling mode can be set separately for each channels (CHn). It can be set to AX+B or P1-P2 for AUX modules. Only when motor measurement is off for an AUX module.
Roll Mode	Roll mode is enabled automatically when the trigger mode is set to Auto, Auto Level, Single, or On Start, and the time axis setting is greater than or equal to 100 ms/div.

Analysis Functions

Item	Specification
Power parameters calculation	Calculate Voltage, Current, Power, Delta parameters, frequency and AUX values from captured waveforms Apparent power, reactive power and power factor and those Sigma values are calculated from the Voltage, Current and Power values
Zooming and Searching	Can search for and then expand and display a portion of the displayed waveform Can choose from the following search methods Edge: Searches for rising or falling edges Time: Searches for data and time
History search feature	Can search through history waveforms for specified conditions Zone search: Displays waveforms that pass through or do not pass through a specified area on the screen. Parameters search: Displays a waveform when the result of the automated measurement of its parameters meet the specified conditions

Cursor measurement	Horizontal, Vertical, H&V, Degree (only T-Y waveform display), and Marker
Cursor measurement (Harmonic measurement)	Re-calculate harmonic parameters using 8192 points data from point of start cursor according to the input frequency
Automated measurement of	Automated measurement of waveform parameters
waveform parameters	Up to 24 items can be displayed P-P, Amp, Max, Min, High, Low, Avg, Mid, Rms, Sdev, +OvrShoot, -OvrShoot, Rise, Fall, Freq, Period, +Width, -Width, Duty, Pulse, Burst1, Burst2, AvgFreq, AvgPeriod, Int1TY, Int2TY, Int1XY, Int2XY, Int1NY (IntegPower/IntegCurrent) Int2hXY (IntegPower/IntegCurrent)
Statistical processing	Application items: Automated measurement values of waveform parameters Statistical items: Max, Min, Avg, Sdv, and Cnt Maximum number of cycles: 64000 cycles (when the number of parameters is ' Maximum total number of parameters: 64000 Maximum measurement range: 100 M points
Normal statistical processing	Statistical processing is performed while waveforms are acquired.
Cyclic statistical processing	Automatically measures the waveform parameters of the data in the acquisition memory and performs statistical processing on the parameter once per cycle period.
Statistical processing of the history data	Automatically measures the waveform parameters of each history waveform and performs statistical processing on the parameters.
User defined computation (MATH)	Maximum 8 expressions for waveforms MATH1 to MATH8, Maximum 4 M points of total, Regarding Digital filter function, please refer to waveform calculation (digital filter) Expressions can be created through the combination of the following operations and constants for waveforms. +, -, -, *, 6HIFT, ABS, SCAT, LOG, EXP, NEG, SIN, COS, TAN, ATAN, PH, DIF, DDIF, INTG, IINTG, BIN, SOR, CUBE, F1, F2, FV, PWHH, PWHL, PWLH, PWLL, PWXX, DUTYH, DITYL, FILT3, FILT3, FILT3, FILT3, HAG, PS, PSD-, CS, TF, CH-, MAG, LOGMAG, PHASE, REAL, IMAG, TREND, TRENDM, TRENDD, TRENDF, _HH, _LL, _XX and ZC
User defined computation (numeric)	Expressions can be created through the combination of the following operations for numeric values, Maximum 20 expressions, F1 to F20. +, -, *, /, ABS, SQRT, SQR, LOG, LOG10, EXP and NEG
Efficiency equation	Up to 4 efficiencies can be displayed by setting the items to measure with the efficiency equations
De-skew function	Compensate the phase difference between voltage and current modules of a power measurement element
GO/NO-GO determination	or a power measurement element The following two types of GO/NO-GO determination are available - Determination using zones on the screen - Determination using the automated measurement values of waveform parameters
	The following operations can be performed at the time of determination: Output of screen, WDF binary capture data, saving of waveform data (to binary, ASCII, or floating-point), or sounding of a notification buzzer.
Recalculation of numeric parameters e Functions	Recalculation of numeric parameters can be done after changing the calculation condition
Item	Specification
Save	Setup data, Waveform data (including History data), numeric data and
Read	image data can be saved external media Waveform data (including History data up to 1000 waveform) and setup data
T Function	······································
Item	Specification
Waveform to be computed	Un, In, Pn, AUXn and MATHn
Number of channels	2
Computation range	From the specified computation start point until the specified number of points have been computed.
Computed points	1 k, 2 k, 5 k, 10 k, 20 k, 50 k, or 100 k
Time windows	 Rectargular, Hanning, Harming, Flat top, or Exponential When the Exponential time window is selected, the following settings must be configured. Damping rate: The weight of the last data point, with the weight of the firs data point in the specified number of FFT points taken to be 100% Resolution: 1% Forcet. Set the area over which computation is performed in terms of a percentage from the first FFT point, taking the number of FFT points to be 100%. Selectable range: 1 to 100% Resolution: 1% Selectable range: 1 to 100%
	Force2: The setting applies to the output (response) signal (second parameter) of a two-waveform FET
Displaying window	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display.
Displaying window	parameter) of a two-waveform FFT Selectable range: to 100% Resolution: 1% The FFT computation results are displayed in a separate window
illt-in Printer (/B5 Option)	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification
ilt-in Printer (/B5 Option) Item Print system	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification Thermal line dot system
illt-in Printer (/B5 Option)	parameter) of a two-waveform FFT Selectable range: to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification
ilt-in Printer (/B5 Option) Item Print system Dot density	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification Thermal line dot system 8 dot/mm
ilt-in Printer (/B5 Option) Item Print system Dot density Sheet width Effective print width Used for orage Functions	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification Thermal line dot system 8 dot/mm 112 mm
ill-in Printer (/B5 Option) Item Print system Dot density Sheet width Effective print width Used for orage Functions D Card	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification Thermal line dot system 8 dot/mm 112 mm 112 mm 104 mm (832 dots) Producing a hard copy of the screen
ill-in Printer (/B5 Option) Item Print system Dot density Sheet width Effective print width Used for orage Functions D Card Item	parameter) of a two-waveform FFT Selectable range: 1 to 100% Resolution: 1% The FFT computation results are displayed in a separate window independent from the normal waveform display. Display range: Set the display range by setting Center and Sensitivity Specification Thermal line dot system 8 dot/mm 112 mm 104 mm (832 dots)

4

Functional specification	SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT0, and C0
Protocol	IEEE St'd 488.2-1992 ISO (ASCII)
Mode	Addressable mode
Address	Talker and listener addresses can be specified from 0 to 30.
Remote mode release	Remote mode can be cleared with the SHIFT + CLEAR TRACE key (except during Local Lockout).
Ethernet	
Ports	1
Connector type	RJ-45 modular jack
Electrical and mechanical specifications	IEEE802.3
Transmission system	Ethernet (1000BASE-T, 100BASE-TX or 10BASE-T)
Communication protocols	TCP/IP DHCP, DNS, SNTP, FTP server and client, and VXI-11
Supported services USB	DHOP, DNS, SIVLP, FTP server and client, and VXI-11
Number of ports	1
Connector type	USB type B receptacle
Electrical and mechanical specifications	USB Rev. 2.0 compliant
Supported transfer modes	HS (High Speed, 480 Mbps) and FS (Full Speed, 12 Mbps)
Supported protocols	USBTMC-USB488 (USB Test and Measurement Class Ver. 1.0)
PC system requirements	A PC with a USB port, running the English or Japanese version of Windows7 (32 bit), Windows Vista (32 bit)
Display Items Numerical Values	
Normal	Measurement functions for each channel (Power measurement element)
Voltage (V)	Urms: true rms value, Umn: rectified mean value calibrated rms value,
	Udc: simple average value, Urmn; rectified mean value, Uac: AC component
Current (A)	Irms: true rms value, Imn: rectified mean value calibrated rms value, Idc: simple average value, Irmn; rectified mean value, Iac: AC component
Active Power (W)	P
Apparent Power (VA)	S: selectable of Urms × Irms, Umn × Imn, Udc × Idc, Urmn × Irmn or Umn × Irms
Reactive Power (Var)	Q
Power Factor	Lambda (P/S) Phi (cos ⁻¹ P/S)
Phase Angle (deg) Frequency (Hz) ¹¹	fU: Voltage frequency
	fl: Current frequency (when it is lower frequency of the range, customer can select Error or 0 for the data)
Voltage Peak value of $\pm(V)$	U+pk: Voltage maximum +peak value during one update period U-pk: Voltage maximum –peak value during one update period
Current Peak value of ±(A)	I+pk: Current maximum +peak value during one update period I-pk: Current maximum –peak value during one update period
Instant Power Peak value of ±(W)	P+pk: Instant Power maximum +peak value during one update period P-pk: Instant Power maximum –peak value during one update period
Crest Factor	CfU: Voltage crest factor, Cfl: Current crest factor
Corrected Power (W) *1 Not available for External Clock inp	Pc: IEC76-1 (1976), IEEE C57.12.90-1993, or IEC76-1 (1993) ut
Sigma Items	Symbol and meaning
Normal	Sigma Measurement functions for both A and B wiring systems (power
Voltage (V)	element combination) UrmsSigima: true rms value, UmnSigma: rectified mean value calibrated
	rms value, UdcSigma: simple average value, UrmnSigma; rectified mean value, UacSigma: AC component
Current (A)	IrmsSigma: true rms value, ImnSigma: rectified mean value calibrated rms value, IdcSigma: simple average value, IrmnSigma; rectified mean value, lacSigma: AC component
Active Power (W)	PSigma
Apparent Power (VA)	SSigma (depends on Type, 1, 2 or 3)
Reactive Power (Var) Power Factor	QSigma (depends on Type, 1, 2 or 3)
Power Factor Phase Angle (deg)	LambdaSigma PhiSigma
Corrected Power (W)	PcSigma: IEC76-1 (1976), IEEE C57.12.90-1993, or IEC76-1(1993)
Efficiency 1 to 4	Eta 1 to Eta 4 by setting of user
Harmonic analysis function (/C	35 Option) Symbol and meaning
Harmonics	Measuring functions of Harmonic analysis
Voltage (V)	U (k): k-th order ^{*1} voltage true rms value, U: total ^{*2} voltage true rms value
Current (A)	I (k): k-th order current true rms value, I: total current true rms value When k=0, it shows DC component
Active Power (W)	P (k): k-th order active power value, P: total active power value When k=0, it shows DC component
Apparent Power (VA)	S (k): k-th order apparent power value, S: total apparent power value When k=0, it shows DC component
Reactive Power (Var)	Q (k): k-th order reactive power value, Q: total reactive power value
Power Factor	When k=0, it shows 0 Lambda(k): k-th order power factor value, Lambda: total power factor value
Phase Angle (deg)	Earlibear(v): k-in order power ractor value, Earlibear: lotal power ractor value Phi (k): Phase angle between k-th order voltage and current, Phi: Phase angle of current refers to voltage waveform PhiU (k): Phase angle of k-th order voltage refers to the fundamental
	voltage U (1) Phil (k): Phase angle of k-th order current refers to the fundamental current I (1)
Impedance of load circuit (Ohm) Z(k): Impedance of load circuit of th k-th order harmonic waveform

Accuracy

Resistance and reactance of load circuit (Ohm)	Rs (k): Resistance of load circuit of k-th order harmonic waveform when resistor R, inductor L and capacitor C are connected in series Xs (k): Reactance of load circuit of k-th order harmonic waveform when resistor R, inductor L and capacitor C are connected in series Rp (k): Resistance of load circuit of k-th order harmonic waveform when resistor R, inductor L and capacitor C are connected in parallel Xp (k): Reactance of load circuit of k-th order harmonic waveform when resistor R, inductor L and capacitor C are connected in parallel
Harmonic distortion factor [%]	Uhdf (k): Ratio of k-th order voltage value of the voltage value, U (1) or U Ihdf (k): Ratio of k-th order current value of the current value, I (1) or I Phdf (k): Ratio of k-th order power value of the power value, P (1) or P
Total harmonic distortion [%]	Uthd: Ratio of the total harmonic voltage ³ of the voltage value, U (1) or U lthd: Ratio of the total harmonic current of the current value, I (1) or I Pthd: Ratio of the total harmonic power of the power value, P (1) or P
Telephone harmonic factor ^{*4} (IEC34-1 (1996))	Uthf: Telephone harmonic factor of voltage Ithf: Telephone harmonic factor of current
Telephone influence factor ^{*4} (IEEE Std 100 (1996))	Utif: Telephone influence factor of voltage Itif: Telephone influence factor of current
Harmonic voltage factor ^{*4} (IEC34-1 (1996))	hvf: Harmonic voltage factor
Harmonic current factor ^{:4} (similar method of hvf)	hcf: Harmonic current factor
Frequency of PLL source	fU or fI, frequency of PLL source, voltage (fU) or current (fl) Shows [] when the PLL source is not set.
K-factor	K-factor

K-factor

N-ridCUI

N-rid

Sigma Items Symbol and the meaning Item Harmonic Sigma Measurement functions for both A and B wiring systems (power element combination) Voltage (V) k is 1, fundamental voltage true rms value, or k is total, total voltage true rms value USigma (k): k is 1, fundamental current true rms value, or k is total, total current true rms value Current (A) ISigma (k): Active Power (W) PSigma (k): k is 1, fundamental active power value, or k is total, total active power value Apparent Power (VA) SSigma (k): k is 1, fundamental apparent power value, or k is total apparent power value Reactive Power (Var) QSigma (k): k is 1, fundamental reactive power value, or k is total, total reactive power value Power Factor LambdaSigma (k): k is 1, fundamental power factor value, or k is total, total power factor value

The total value is determined from the fundamental waveform (1st order) and all harmonic components (2nd order to the upper limit of harmonics analysis). The DC component can also be included. As for Sigma values, only Total values and fundamental value are acclusted.

Phase items

Item	Symbol a	Symbol and the meaning		
Harmonic	Measuren	Measurement functions of phase angles among power elements		
Phase angle U1-U 2 (deg)	PhiU1-U2	Phase angle of power element 2 fundamental voltage (U2 (1)) refers to the power element 1 fundamental voltage (U1 (1))		
Phase angle U1-U3 (deg)	PhiU1-U3	Phase angle of power element 3 fundamental voltage (U3 (1)) refers to the power element 1 fundamental voltage (U1 (1))		
Phase angle U1-I1 (deg)	PhiU1-I1:	Phase angle of power element 1 fundamental current (I1 (1)) refers to the power element 1 fundamental voltage (U1 (1))		
Phase angle U2-I2 (deg)	PhiU2-I2:	Phase angle of power element 2 fundamental current (I2 (1)) refers to the power element 2 fundamental voltage (U2 (1))		
Phase angle U3-I3 (deg)	PhiU3-I3:	Phase angle of power element 3 fundamental current (I3(1)) refers to the power element 3 fundamental voltage (U3(1))		
Phase angle I1-I2 (deg)	Phil1-l2:	Phase angle of power element 2 fundamental current (I2(1)) refers to the power element 1 fundamental voltage (I1(1))		
Phase angle I2-I3 (deg)	Phil2-I3:	Phase angle of power element 3 fundamental current (I3 (1)) refers to the power element 2 fundamental voltage (I2 (1))		
Phase angle I3-I1 (deg)	Phil3-I1:	Phase angle of power element 1 fundamental current (I1 (1)) refers to the power element 3 fundamental voltage (I3 (1))		

Delta Function

Item	Symbol and the meaning	
Delta Measurement function of Delta calculation by each Sigma		
Voltage [V]	Delta U1 to Delta U3, and Delta Usigma Difference: differential voltage calculation of U1 to U2, 3P3W -> 3V3A: Line to Line voltage calculation between U1 and U2 DELTA -> STAR: Phase voltages calculation by Line to Line voltages STAR -> DELTA: Line to Line voltage calculation by Phase voltages	
Current [A]	Delta I Difference: differential current calculation of 11 to 12, 3P3W -> 3V3A: Phase current calculation excepting 11 and 12 DELTA -> STAR: Neutral current calculation by Phase currents STAR -> DELTA: Neutral current calculation by Phase currents	
Power [W]	Delta P1 to Delta P3, and Delta P Sigma DELTA -> STAR: Phase powers calculation by 3V3A wiring * Calculate each Sigma function	

		Sensor Frequency Accuracy (700012)
AUX analysis function		DC: ±(0.2% of reading + 0.4% of range) + 50 μV × U
Torque and Speed input		$0.1 \text{ Hz} \le f < 10 \text{ Hz} : \pm (0.2\% \text{ of reading} + 0.2\% \text{ of range})$
When motor mode is on		$10 \text{ Hz} \le f < 45 \text{ Hz}: \pm (0.2\% \text{ of reading} + 0.1\% \text{ of range})$
Item	Combols and Maniana	$45 \text{ Hz} \le f \le 1 \text{ kHz}: \pm (0.1\% \text{ of reading} + 0.1\% \text{ of range})$
Item	Symbols and Meanings	1 kHz < f ≤ 10 kHz: ±(0.1% of reading + 0.16% of range)
Rotating speed	Speed: Motor rotating speed	$10 \text{ kHz} < f \le 50 \text{ kHz}: \pm (0.2\% \text{ of reading} + 0.2\% \text{ of range})$
Torque	Torque: Motor torque	$50 \text{ kHz} < f \le 100 \text{ kHz} \pm (0.6\% \text{ of reading} + 0.4\% \text{ of range})$
Monitor output (W)	Pm: Motor's mechanical output (mechanical power)	100 kHz < f ≤ 200 kHz: ±(1.5% of reading + 0.6% of range)
When motor mode is off		200 kHz < f ≤ 400 kHz: ±(1.5% of reading + 0.6% of range)
		$400 \text{ kHz} < f \le 500 \text{ kHz} : \pm ((0.1 + 0.004 \times f^{*})\% \text{ of reading} + 0.6\% \text{ of range})$
Item	Symbols and Meanings	500 kHz < f ≤ 1 MHz: ±((0.1 + 0.004 × f*)% of reading + 6% of range)
Auxiliary input	Aux3 to Aux8	* The unit of f in the equation for the reading error is (kHz).
		* U is voltage reading value.

	display (OL conversion) : Displays up to 140% of the range rating Overload display [-OL-] appears if 140% is exceeded. Displays up to 2 MHz (OF display at 10 GHz or higher if scaling is used)		
Ana	m display (zero suppression) alog: None se: Displays pulse frequency down to 1.8 Hz Frequencies less than 1.8 Hz are suppressed to zero.		
AUX1, AU	X2 A(X × NULL) + B A: slope of the external signal X: average value of the external signal's input voltage (AVG [AUX_input1(n)]) B: offset NULL: null value A(X × NULL) + B A: slope of the external signal X: Pulse [Hz] B: offset NULL: null value [Hz] If the pulse level is lower than the measurement lower limit, "Error" or "0" can be selectable.

Item	Specification		
Standard operating conditions	Ambient Temperature: 23 ±5°C Ambient humidity: 20 to 80%RH Supply Voltage and frequency Within ±1% of rating After the PX8000 has been warmed up and then calibration has been performed.		
Warm up time	At least 30 mins		
Storage environment	Temperature: Humidity: Altitude:	-25 to 60°C 20 to 80% RH (no condensation) 3000 m or less	
Operation environment	Temperature: Humidity:	5 to 40°C normal position, 5 to 35°C when the rear panel is parallele to the flower 20 to 80% RH without using the printer, no condensation	
	Humidity: Altitude:	35 to 80% RH when the printer is used, no condensation 2000m or less	
Rated supply voltage	100 to 120 VAC/220 to 240 VAC (Auto switching)		
Rated supply voltage range	90 to 132 VAC/198 to 264 VAC		
Rated supply frequency	50/60 Hz		
Permitted supply voltage frequency range	48 to 63 Hz		

Model	Suffix Code	Description
PX8000		Precision Power Scope
Power Cord	-D	UL/CSA Standard
	-F	VDE standard
	-H	GB standard
	-N	NBR standard
	-Q	BS standard
	-R	AS standard
Languages	-HE	English menu
	-HG	German menu
	-HJ	Japanese menu
Options	/B5	Built-in printer (112 mm)
	/C20	IRIG function
	/G5	Harmonic measurement
	/M1	50 M memory expansion [™]
	/M2	100 M memory expansion ^{*1}
	/P4	4 Outputs of probe power
	/PD2	4 Outputs of sensor power ²

*1: Only one can be selected.

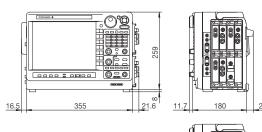

*2: When use Shunt Resistor Box for measurement, /PD2 option and Current module 760812 are required. The /PD2 option requires Firmware version Ver. 3.2 or later.

Name	Model	Description
Voltage Module	760811	Current module 760812 or 760813 must be ordered together
Current Module	760812	Voltage module 760811 must be ordered together
Current Module	760813	Voltage module 760811 must be ordered together
Auxiliary Module	760851	Auxiliary (AUX) module for sensor input, Torque/Speed
Name	Model	Description

PowerViewerPlus 760881 Viewer software dedicated for PX8000

- The German language menu will be released soon.
 Selection of both /M1 and /M2 is not available for one main frame. The standard memory length is 10 M points/CH.
- The power value will be calibrated using a pair of Voltage (760811) and Current (760812/760813) modules, therefore an equal quantity of these must be ordered together.
 A test Certificate of the Voltage Module includes the test results of the voltage and power values
- which are calibrated with one paired Current Module. Also the test Certificate of the Current Module includes the test results of the current and power values which are calibrated with one paired Voltage Module.

Standard Accessories; Power cord (1 set), Front cover (1 set), Rubber foot (4 sets), Cover plate assy (8 sets), Current terminal adapter (4 sets), Voltage terminal adapter (4 sets), Printer chart (1 set for /B5), Getting started guide (1 set), CD (Getting started guide, Futures guide, User's Manual, Communication interface manual by PDF data)

Models with the Sensor Power Supply (/PD2) Option *A stand is not available on models

with the sensor power (/PD2) option Tilting is not possible.

is trademark of Yokogawa Electric Corporation.

Safety Precautions for Laser Products

The voltage module (760811), the current modules (760812/760813) and the AUX module (760851) uses laser light sources internally. These modules or respond to Class 1 laser product as defined in the IEC60825-1: 2007 Safety of Laser Products-Part 1: Equipment Classification and Requirements.

CT2000A AC/DC Current Sensor Maximum 2000 Arms, DC to 40 kHz (-3 dB)	CT1000	AC/DC Current Sensor	Maximum 1000 Apk, DC to 300 kHz (-3 dB)
	CT2000A	AC/DC Current Sensor	Maximum 2000 Arms, DC to 40 kHz (-3 dB)

A1323EZ Shunt Resistor Box 5 Ω ±0.05% A1324EZ Shunt Resistor Box 10 Ω ±0.02% 1 20 Ω ±0.02% A1325EZ Shunt Resistor Box 1 A1559WI Current sensor cable Cable length 3 m for Shunt Resistor Box 1 A1560WL Current sensor cable Cable length 5 m for Shunt Resistor Box 1 A1589WL Current Sensor Direct Cable Cable length 3 m (Burden resistor 2.7 Ω) 1 A1628WL Current Sensor Direct Cable Cable length 5 m (Without Burden resistor) 1 B8213ZA (screw-fastened type) Two adapters to a set for current 4 Safety Terminal Adapter B8213ZD Safety Terminal Adapter (screw-fastened type) Two adapters to a set for voltage 4 B9284LK External Sensor Cable Current sensor input connector, Length 0.5 m B9317WD Wrench For B8213ZD and B8213ZA 1 B9988AE Printer Roll Paper For PX8000, 10 m × 10 1

▲ Due to the nature of this product, it is possible to touch its mental parts. Therefore, there is a risk of electric shock, so the product must be used with caution.

*1: Use these products with low-voltage circuits (42 V or less).

Yokogawa's approach to preserving the global environment

- Vokogawa's electrical products are developed and produced in facilities that have received ISO14001 approval.
- In order to protect the global environment, Yokogawa's electrical products are designed in accordance with Yokogawa's Environmentally Friendly Product Design Guidelines and Product Design Assessment Criteria.
