### DATA SHEET

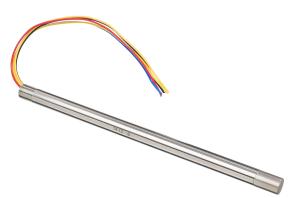

# DESIGN • MANUFACTURE • CUSTOMISE • CONFIGURE

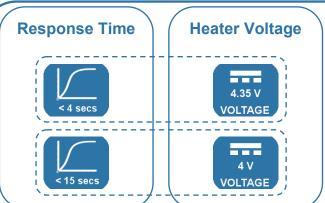

### Zirconia O<sub>2</sub> Sensors

### Probe Series—Long Housing

- Zirconium dioxide (ZrO<sub>2</sub>) sensing elements
- Long life, non-depleting technology
- Integral heating element
- High accuracy
- Requires an external interface board to operate<sup>a</sup>

**OUTPUT VALUES** 

Internal operational temperature

Response time (10—90% step)

Warm up time (from standby)

Output stabilisation time

Standard response sensor

Warm up time (prior to sensor operation)

Fast response sensor

Oxygen pressure range

Accuracy

2mbar—3bar max

5mbar max

700°C

< 15s

< 4s

60s

20s

~ 180s

- No reference gas required
- No need for temperature stabilisation
- Three lengths available; 220mm, 400mm and 600mm

## **TECHNICAL SPECIFICATIONS**

Heater voltage<sup>b</sup>

Operating (standard response)  $4V_{DC} \pm 0.1V_{DC} (1.7A)$ Standby  $1.65V_{DC}(0.7A)$ Operating (fast response)  $4.35V_{DC} \pm 0.1V_{DC} (1.85A)$ 

Standby 2V<sub>DC</sub> (0.85A)

Pump impedance at 700°C°

Permissible gas temperature

-100°C to +250°C Standard temperature High temperature -100°C to +400°C

0-10 m/s Gas flow rate

Repetitive permissible acceleration 5g Incidental permissible acceleration 30q

< 6kΩ

Other sensor options available on request, email: technical@sstsensing.com

> **Need help? Ask the expert** Tel: + 44 (0)1236 459 020 and ask for "Technical"

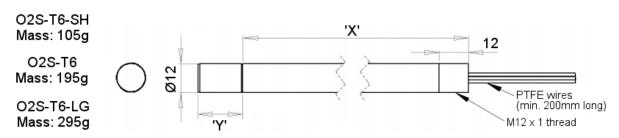

- Interface board sold separately; contact technical@sstsensing.com for details.
- b) It is important to measure the heater voltage as close to the sensor as possible due to voltage drops in the supply cable.
- If providing your own interface board, note that the constant current source used in the pump circuit should be designed to drive a load of up to  $6k\Omega$ .

### **OUTLINE DRAWING**

All dimensions shown in mm.

Where 'X' is the probe length, see Order Information for details.

**NOTE:** High temperature version probes have single-core wires.

Where 'Y' is the cap length;

Standard response—17.8mm

Fast response—15mm

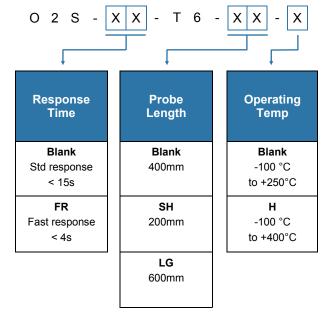

### **ELECTRICAL INTERFACE**

#### ead Wires

Wire	Designation
Red	Pump
Black	Common
Yellow	Heater (1)
Blue	Sense
Yellow	Heater (2)

Generate your specific part number using the convention shown below. Use only those letters and numbers that correspond to the sensor options you require — omit those you do not.

Do not exceed maximum ratings and ensure sensor(s) are operated in accordance with their requirements.

Carefully follow all wiring instructions. Incorrect wiring can cause permanent damage to the device.

Zirconium dioxide sensors are damaged by the presence of silicone. Vapours (organic silicone compounds) from RTV rubbers and sealants are known to poison oxygen sensors and MUST be avoided. Do NOT use chemical cleaning agents.

Failure to comply with these instructions may result in product damage.

### INFORMATION

As customer applications are outside of SST Sensing Ltd.'s control, the information provided is given without legal responsibility. Customers should test under their own conditions to ensure that the equipment is suitable for their intended application.

For detailed information on the sensor operation refer to application note AN0043 Operating Principle and Construction of Zirconium Dioxide Oxygen Sensors.

For technical assistance or advice, please email:

technical@sstsensing.com

General Note: SST Sensing Ltd. reserves the right to make changes to product specifications without notice or liability. All information is subject to SST Sensing Ltd.'s own data and considered accurate at time of going to print.
